PERSONAL STATEMENT

My research group aims to develop novel therapeutics at the interface of immunology, engineering, and pharmaceutical sciences. Specifically, we are developing drug delivery systems designed to target and modulate lymphoid organs and the gut microbiome in the context of vaccines and immunotherapies against cancer, infectious pathogens, and autoimmune disorders. Our work focusing on the development of nanotechnologies for vaccination and immunotherapy has been published in *Nature Materials*, *Nature Nano*, *Nature Medicine*, *Nature Biomedical Engineering*, and *Sci Transl Med*. Our work has also led to 27 issued or pending patent applications as well as 3 startup biotech companies.
