

Recombinant Drugs

After figuring out how to grow recombinant bacteria on an industrial scale and how to harvest the insulin they produce, it was time to bring the recombinant insulin to the market. In 1982 Food and Drug Administration approved Humulin, Eli Lilly's recombinant insulin made from Genentech's specially modified bacteria. It was the first drug produced through recombinant DNA technology and among the first genetically engineered products to be available to consumers.

Following the success of Humulin, recombinant DNA technology was quickly adopted to replace older methods of producing medical products from human growth hormone to vaccines. Although scientists have since developed new biotechnology techniques, recombinant DNA still plays an important role in the production of several major medical products. Among the objects below are several of the early formulations of Humulin as well as some of the other early recombinant pharmaceuticals produced in the 1980s and 1990s.

Recombinant DNA and the Birth of Biotech

Recombinant DNA in the Lab

The Business of Biotech

Recombinant Drugs

National Museum of American History
Intron A; Interferon Alfa-2B Recombinant, 10 million IU

National Museum of American History
Recombivax HB, Hepatitis B Vaccine (Recombinant) Pediatric

National Museum of American History
Recombivax HB, Hepatitis B Vaccine (Recombinant) Adult

Halozyme EX2008
Merck v. Halozyme
PGR2025-00030

Formulation, 0.5 mL

Formula, 3 mL

National Museum of American History
Roferon-A, Interferon alfa-2a recombina nt, injectable solution, 1mL

National Museum of American History
Protropin

National Museum of American History
Protropin; somatrem for injection

National Museum of American History
Activase, 50 mg; Alteplase,

National Museum of American History
Humulin N, NPH, human insulin (recombina nt)

National Museum of American History
Humulin BR, Buffered Regular, insulin

Recombinant

ant DNA origin)
isophane suspension

human injection, USP,
recombinant DNA origin

National Museum of American History
Humulin R, Regular, insulin human injection, USP, recombinant DNA origin

National Museum of American History
Humulin L, LENTE, human insulin (recombinant DNA origin) zinc suspension

National Museum of American History
Glucagon Emergency Kit for Low Blood Sugar (Glucagon for Injection (rDNA origin) 1 mg)
