

## About Gatespace

Gatespace AB develops and markets software platforms, management systems, and development tools for service gateways. Service gateways form the basis for the infrastructure on which the next wave of the Internet, network based services, will be built. Service gateways enable the "intelligent networked home" as well as mobile services in cars, mobile phones etc.

Gatespace develops products based on the new proposed standard for the area of network based services, Open Service Gateway Initiative ([www.osgi.org](http://www.osgi.org)). The founders of Gatespace have been active in the technical work of OSGi since that activity started in May 1998, and Gatespace is a charter member of OSGi.

Gatespace was formed by [CR&T; \(Carlstedt Research & Technology AB\)](#) in July 1999 as an independent software company. Gatespace is based in Göteborg, Sweden, with operations also in Stockholm and internationally.
