Re: CentralSquare Technologies License Proposal to Carbyne

Dear Amir,

We bring to your attention one of CentralSquare’s patents, U.S. Patent No. 9,301,117 (attached as Exhibit A). As you are aware, CentralSquare offers a number of award-winning public safety administration products, which are also the subject of a large portfolio of patents.

As explained further below, based on publicly available materials (attached here as Exhibits B and C), the ’117 Patent appears relevant to Carbyne’s interests.

Specifically, independent Claim 1 recites: “a call reception module configured to receive incoming emergency voice calls being placed to an emergency call center through an emergency communications network from wireless mobile devices, the incoming emergency voice calls including a first voice call placed from a first wireless mobile device.” As shown below, Carbyne’s product receives incoming emergency calls from wireless mobile devices through an emergency communications network.

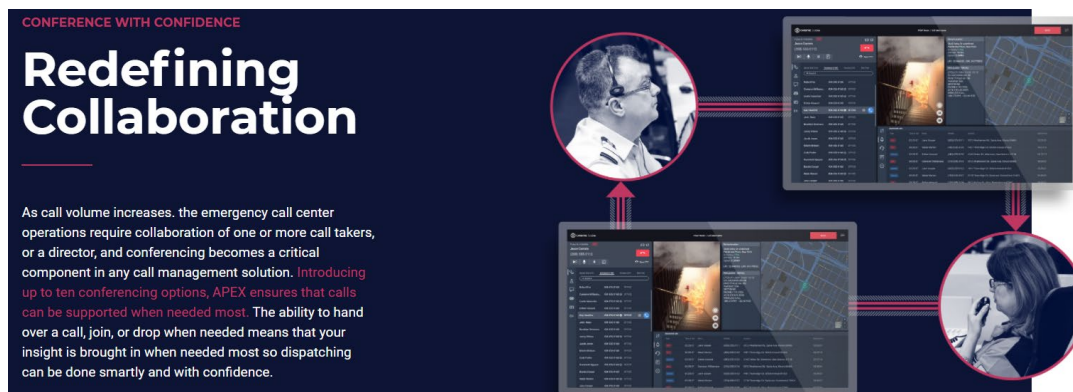

Figure 1 (Exhibit B)

Claim 1 of '117 patent further recites: “an outgoing message module configured to generate outgoing textual messages for transmission to wireless mobile devices from which incoming emergency voice calls are received such that a first outgoing textual message is generated for transmission to the first wireless mobile device based on the first voice call.” As shown below in Figure 2, Carbyne’s product receives voice calls and generates an outgoing text message to the caller.

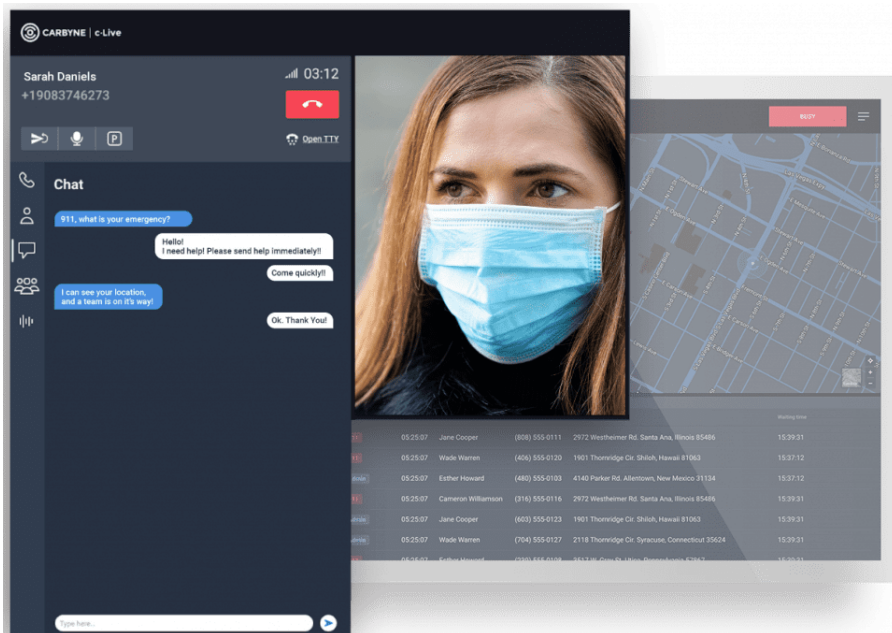

Figure 2 (Exhibit B)

Claim 1 further recites: “a transmission module configured to transmit the outgoing textual messages to the appropriate wireless mobile devices through a second communications network that is different than the emergency communications network such that the first outgoing textual message is transmitted to the first wireless mobile device through the second communications network.” Carbyne’s product includes a second communications network that is configured to transmit an outgoing textual message to the wireless device. The second communications network (Carbyne’s cloud network) is different from the emergency communications network that received the call (e.g., a locality’s 911 emergency communications network).

Finally, Claim 1 recites “a web-hosting module configured to host web resources configured to: (i) query wireless mobile devices for location information; and (ii) share, responsive

to receipt of location information, received location information with the presentation module” and “wherein the presentation module is further configured to present shared queried location information to emergency operators through the user interface.” As shown below, Carbyne’s product obtains the location information from the caller’s mobile device and presents it to emergency operators.

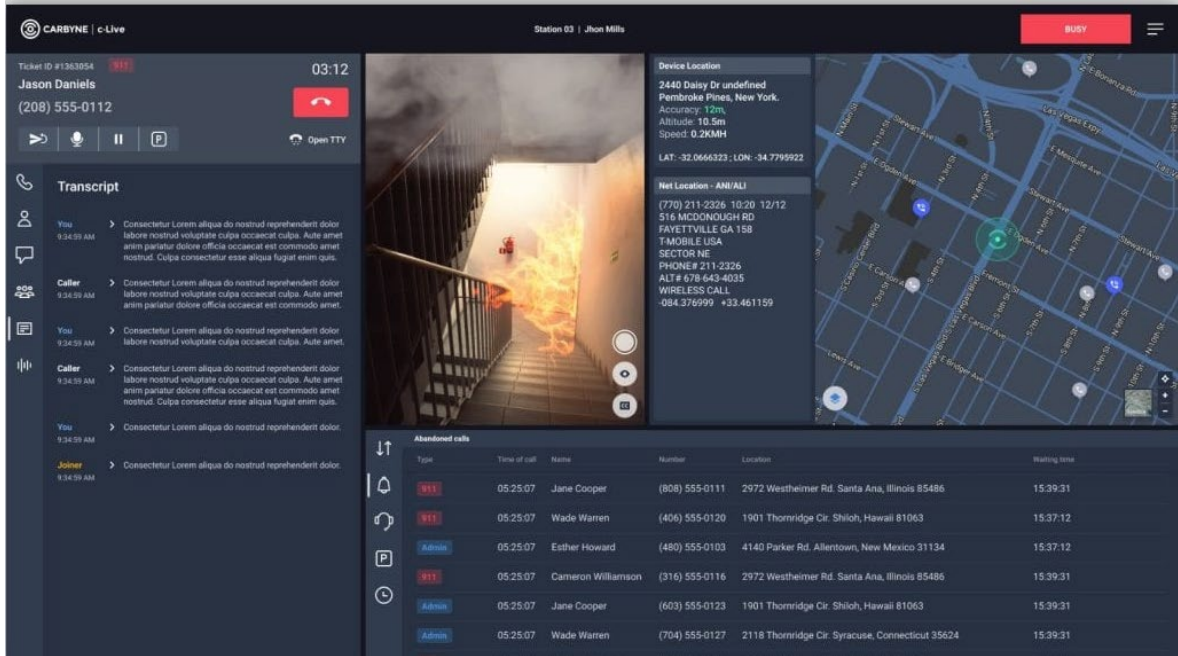

Figure 3 (Exhibit B)

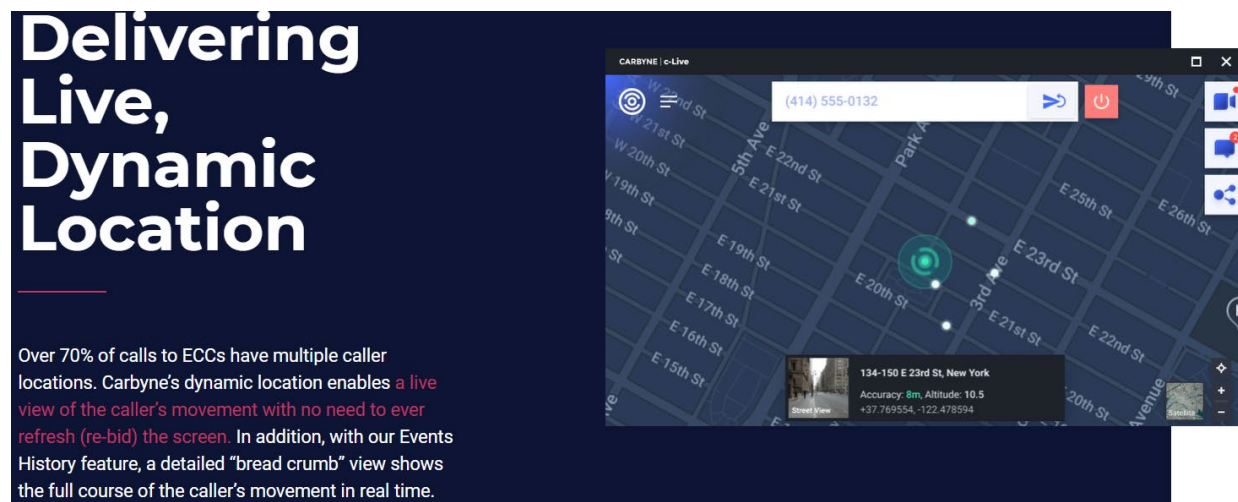

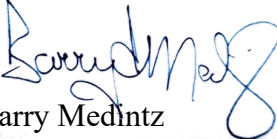

Figure 4 (Exhibit C)

We are writing to Carbyne to acquaint you with the CentralSquare patent portfolio and to open a dialogue on licensing, of the CentralSquare patent portfolio. CentralSquare is prepared to grant Carbyne coverage under the portfolio for both past and future use, to allow Carbyne to continue providing and using all of its technologies. CentralSquare has a substantial additional patent portfolio, and it appears that Carbyne would also be interested in at least three other patents, including U.S. Patent Nos. 9,420,116; 8,976,939; and 9,167,379. We can provide further information on terms and conditions of such a license.

If you would like to discuss CentralSquare's patent portfolio and/or our collaborative efforts, please contact me at (404) 308-0289 or via email at barry.medintz@centralsquare.com.

We look forward to working with you to resolve this matter and on future endeavors.

Very truly yours,

Barry Medintz
