PRODUCTS: ViVO pay™

Product Overview

ViVOpay™ transforms merchant legacy devices into next-generation contactless payment systems.

Overview

- ViVOpay 5000
- ViVOpay 4000
- ViVOpay 4500
- ViVOpay 3000
- Drive-Thru
- OEM

ViVOpay™ is a patent-pending, plug-n-play hardware application that enables existing merchant magnetic stripe point-of-sale (POS) systems to accept payment from contactless credit and debit cards as well as from infrared-enabled cell phones and PDAs.

ViVOpay enables contactless payments without any hardware or software changes to existing devices at a minimum cost. Merchants themselves can easily install any of the ViVOpay terminals to make legacy systems proximity-compatible.

ViVOpay comes in several different packages to fulfill the specific needs of each merchant:

ViVOpay 4000 Easy Mount Solution: The flexible ViVOpay 4000 contactless payment device can easily be mounted onto a wide variety of existing Point of Sale (POS) terminals, Electronic Cash Register (ECR) systems, countertops, windows and a variety of other surfaces providing for physical and functional integration with the existing merchant system and check-out layout.

ViVOpay 3000 RF Countertop: Enables contactless credit, debit, gift and stored valued card payments with minimum change to existing infrastructure. Merchants themselves can easily install the plug-and-play ViVOpay 3000 and immediately start accepting contactless payments such as ExpressPay from American Express®, MasterCard® PayPass™, Visa® contactless and Chase blink™ as well as their own contactless gift, loyalty, etc.

ViVOpay 5000 EMV Contactless: The powerful ViVOpay 5000 makes possible contactless EMV programs in Asia, EMEA and Latin America by enabling existing POS and ECR systems with contactless EMV capabilities compatible with programs such as

Visa® Wave, OneSmart MasterCard PayPass™, OneSmart® MasterCard Pre-Authorized and Expresspay™ from American Express®.

ViVOpay NFC
Countertop:

Enables payment transactions directly from consumer's mobile phones. Consumers will just wave their mobile phones to securely transmit credit, debit, loyalty or prepaid card information to ViVOpay-enabled POS systems using Near Field Communication (NFC) technology being introduced into handsets by the largest mobile phone manufacturers.

ViVOpay DT Drive-Thru: Makes contactless credit, debit and gift card payments possible at the Drive-Thru lane with the same easiness of that the ViVOpay countertop units do inside the store.

ViVOpay OEM: ViVOpay OEM boards are easily integrated into existing point-of-sale (POS) systems such as vending machines, kiosks, time & attendance terminals, transportation ticket machines, and others.
