

IBM and Security First Corp. to Develop Integrated Security Technology

Aug 01, 2011

IBM and Security First Corp., a data high availability and security company, recently announced a joint development agreement aimed at delivering increased performance, security, and high data availability to storage and cloud-based computing customers.

Under the agreement, IBM and Security First will combine Security First's patented cryptographic data-splitting technology with the highly parallelized hardware acceleration capabilities of IBM's wire speed processor technology. Specifically, Security First's SPxCore, SPxBitFiler, and SPxConnect products will be integrated directly onto IBM's wire speed system on a chip.

"The combination of IBM's wire speed processor technology and Security First's cryptographic technology can deliver unparalleled cryptographic performance, throughput, and scalability for advanced

Dijan Davari, vice-president, Next Generation Computing Systems and Technology.

"This joint development project will unleash the full potential of being able to cost effectively support the explosion of data storage and remove barriers to cloud use," said Mark O'Hare, CEO of Security First. "Through our combined technologies, Security First and IBM will deliver scalable data security and high availability directly to public and private sector customers that require the highest levels of secure data transmission and storage in the cloud."

The combined cryptographic security solution from IBM and Security First is expected to be available during the first half of 2012.

Trends Keeping an Eye on Business Decisions

Today, AI continues to transform the way data is used to make important business decisions. AI and the cloud together are redefining how video surveillance systems are being used to simulate human intelligence by combining data analysis, prediction, and process automation with minimal human intervention. Many organizations are upgrading their surveillance systems to reap the benefits of technologies like AI and cloud applications.

The Future is Happening Outside the Cloud

For years, the cloud has captivated the physical security industry. And for good

and managing systems. But as the number of cameras grows and resolutions push from HD to 4K and beyond, the cloud's limits are becoming unavoidable. Bandwidth bottlenecks. Latency lags. Rising storage costs. These are not abstract concerns.
