

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
1.	<p><u>'040 Patent</u></p> <p>1. A method for monitoring the presence of a mobile station in one or more special areas associated with the mobile station, the method comprising:</p> <p>(a) repeatedly transmitting from at least one radio communication defining device a radio distinctive defining signal in at least one channel that at least partially defines one of the special areas by its coverage,</p> <p>(b) observing the channel and processing any received signal by the mobile station in order to determine whether or not it is receiving a defining signal,</p> <p>(c) processing any received defining signal by the mobile station and the mobile station determines whether or not the defining signal received is a distinctive defining signal that at least partially defines one of</p>	<p>“checking data”</p> <p>'040 Patent, Claims 1, 4, 10-11, and 13-14</p> <p>'030 Patent, Claims 1 and 7</p> <p>'621 Patent, Claims 1, 5, 10, and 14</p> <p>'032 Patent, Claims 1 and 3</p>	[AGREED]	[AGREED]	<p>“data that the mobile station compares against information from a received signal to determine whether the received signal is a distinctive defining signal”</p>

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>the special areas, and determines whether or not the mobile station is present in one or more of the special areas,</p> <p>(d) sending an updating signal from the mobile station to a mobile telephone network about the mobile station presence in one or more of the special areas, where the updating signal sending is uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station about its presence in each of the special areas, and said updating signal being sent at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area,</p> <p>(e) routing the updating signal from the mobile telephone network to special operating means that adapt the value of at</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>least one operating parameter taking into account the presence of the mobile station in each of the special areas,</p> <p>(f) associating the special areas with the mobile station by transmitting a checking data to the mobile station, this checking data being sent to any mobile station whose presence in the special areas is monitored and being used by the mobile station for determining whether or not the defining signal received is a distinctive defining signal that defines, alone or with other distinctive defining signals, one or more of the special areas associated with the mobile station.</p> <p>4. The method according to claim 1, wherein at least one radio communication defining device is a wireless device whose radio distinctive defining signal is a distinctive wireless</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>signal transmitted by the wireless device in a frequency range outside the frequency range allocated for the mobile telephone network, the distinctive wireless signal containing wireless device identification data and reliable information confirming that the wireless device is effectively located into a predetermined environment, and the checking data associated with this wireless device including the wireless device identification data.</p> <p>10. The method according to claim 1 further comprising, receiving by the mobile station the checking data from the mobile telephone network or a signal of at least one radio device or from manual input.</p> <p>11. A mobile system for monitoring the presence of a mobile station in one or more special areas defined for this</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>mobile station, said system comprising:</p> <p>at least one radio communication defining device for repeatedly transmitting a radio distinctive defining signal that at least partially defines one of the special areas in at least one channel,</p> <p>special operating means for adapting the value of at least one operating parameter taking into account the presence of the mobile station in each of the special areas, and</p> <p>a mobile station, comprising:</p> <p>storage for storing a checking data,</p> <p>observing means for observing said at least one channel, and</p> <p>processing means for processing any received signal in order to determine whether or not the signal received is a defining signal and, if the signal received is a defining signal, for determining based on the</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>checking data whether or not the signal received is a distinctive defining signal and whether or not the mobile station is present in the special area,</p> <p>and the mobile station further comprising</p> <p>transmission means for sending, at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area an updating signal, that is uncorrelated to any mobile station phone call establishment, regarding the presence of the mobile station in one or more of the special areas from the processing means to the special operating means.</p> <p>13. A mobile station, comprising:</p> <p>observing means to observe a channel and process any received signal in order to</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>determine whether or not it is receiving a defining signal, a processor to process any received defining signal and to determine, based on a previously obtained checking data, whether or not the defining signal received is a distinctive defining signal that at least partially defines a special area,</p> <p>to determine whether or not it is present in one or more special areas, and to send an updating signal at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area to a mobile telephone network about its presence in one or more of the special areas, where said updating signal sending is uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>about its presence in the special areas.</p> <p>14. A non-transitory computer readable medium storing computer readable program code for causing a computer to perform a method, the method comprising:</p> <p>(a) observing a channel and processing any received signal by the mobile station in order to determine whether or not it is receiving a defining signal,</p> <p>(b) processing any received defining signal by the mobile station and the mobile station determines, based on a previously obtained checking data, whether or not the defining signal received is a distinctive defining signal that at least partially defines one of the special areas, and determines whether or not the mobile station is present in one or more of the special areas,</p> <p>(c) sending an updating signal from the mobile station to a</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>mobile telephone network about the mobile station presence in one or more of the special areas, where the updating signal sending is uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station about its presence in each of the special areas, and said updating signal being sent at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area.</p> <p><u>'030 Patent</u></p> <p>1. A method associated with a provider of presence related services in connection with the use of a mobile station and at least a first radio communication defining device that transmits a first distinctive defining signal, the first distinctive defining signal at</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>least partly defines a first special area by its coverage, the method comprising:</p> <p>electronically storing in one or more memories data capable of linking the mobile station to the first special area, the data including a checking data of the first radio communication defining device and a first identifier related to the mobile station,</p> <p>transmitting via a mobile telephone network to the mobile station at least a portion of the checking data,</p> <p>receiving from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call establishment that identifies the mobile station's presence in at least the first special area, the updating signal including a second identifier related to the mobile station,</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the first special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the first special area.</p> <p>7. The method according to claim 1, wherein the storing of the checking data in the one or more memories comprises electronically receiving from the mobile station the checking data.</p> <p><u>'621 Patent</u></p> <p>1. A method associated with a provider of presence related services in connection with the use of a mobile station that is operable within a mobile telephone network, and at least</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>a first radio communication defining device that transmits a first distinctive defining signal, the first distinctive defining signal at least partly defines a special area by its coverage, the provider of presence related services having one or more servers, the method comprising:</p> <p>electronically storing in the one or more servers of the provider of presence related services data capable of linking the mobile station to the special area, the data including a checking data of the first radio communication defining device and an identifier related to the mobile station, the provider of presence related services being different than the mobile telephone network,</p> <p>receiving in the one or more servers of the provider of presence related services from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>establishment that identifies the mobile station's presence in the special area,</p> <p>the one or more servers of the provider of presence related services deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the special area.</p> <p>5. The method according to claim 1, wherein the storing of the checking data in the one or more servers of the provider of presence related services comprises electronically receiving from the mobile station the checking data.</p> <p>10. A method associated with a provider of presence related</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>services in connection with the use of a mobile station that is operable within a mobile telephone network, and at least a first radio communication defining device that transmits a first distinctive defining signal, the first distinctive defining signal at least partly defines a special area by its coverage, the provider of presence related services having one or more servers, the method comprising:</p> <p>electronically storing in the one or more servers of the provider of presence related services data capable of linking the mobile station to the special area, the data including a checking data of the first radio communication defining device and an identifier related to the mobile station, the provider of presence related services being different than the mobile telephone network,</p> <p>transmitting to the mobile station from the one or more</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>servers at least a portion of the checking data,</p> <p>receiving in the one or more servers from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call establishment that identifies the mobile station's presence in the special area, the updating signal including the identifier or other identifier related to the mobile station,</p> <p>the one or more servers deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the special area.</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>14. The method according to claim 10, wherein the storing of the checking data in the one or more servers of the provider of presence related services comprises electronically receiving from the mobile station the checking data.</p> <p><u>'032 Patent</u></p> <p>1. A method associated with a provider of presence related services and a mobile station that stores in a memory first checking data and uses the first checking data to determine whether or not a defining signal received from a radio communication defining device is a distinctive defining signal, the distinctive defining signal at least partly defines a special area by its coverage, the method comprising:</p> <p>one or more servers of a provider of presence related services receiving from the mobile station via a mobile telephone network an updating</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>signal that identifies the mobile station's presence in the special area, the provider of presence related services being different than the mobile telephone network; and</p> <p>storing in the one or more servers a parameters database having an operating parameter whose value is determined at least in part by the updating signal received from the mobile station; and</p> <p>sending from the one or more servers to the mobile station second checking data different from the first checking data to modify the special area.</p> <p>3. A method associated with the use of a mobile station that stores and uses checking data to determine whether or not a defining signal received from a radio communication defining device is a distinctive defining signal, the distinctive defining signal at least partly defines a</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>special area by its coverage, the method comprising:</p> <p>sending from the mobile station to at least one server of a provider of presence related services an updating signal via a mobile telephone network that identifies the mobile station's presence in the special area, the updating signal being indicative of the mobile station's presence in the special area, the provider of presence related services being different than the mobile telephone network; and</p> <p>receiving in the mobile station from the at least one server second checking data different from the first checking data to modify the special area.</p>				
2.	<p><u>'040 Patent</u></p> <p>1. A method for monitoring the presence of a mobile station in one or more special areas associated with the mobile station, the method comprising:</p>	<p>“special area”</p> <p>'040 Patent, Claims 1, 7, 9, 11-14</p> <p>'720 Patent, Claims 1, 2</p>	[AGREED]	[AGREED]	“area within the coverage of at least one distinctive defining signal”

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>(a) repeatedly transmitting from at least one radio communication defining device a radio distinctive defining signal in at least one channel that at least partially defines one of the special areas by its coverage,</p> <p>(b) observing the channel and processing any received signal by the mobile station in order to determine whether or not it is receiving a defining signal,</p> <p>(c) processing any received defining signal by the mobile station and the mobile station determines whether or not the defining signal received is a distinctive defining signal that at least partially defines one of the special areas, and determines whether or not the mobile station is present in one or more of the special areas,</p> <p>(d) sending an updating signal from the mobile station to a mobile telephone network about the mobile station</p>	<p>'030 Patent, 1-2, 10-11</p> <p>'621 Patent, Claims 1-2, 8, 10-11, 17</p> <p>'032 Patent, Claims 1, 3</p>			

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>presence in one or more of the special areas, where the updating signal sending is uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station about its presence in each of the special areas, and said updating signal being sent at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area,</p> <p>(e) routing the updating signal from the mobile telephone network to special operating means that adapt the value of at least one operating parameter taking into account the presence of the mobile station in each of the special areas,</p> <p>(f) associating the special areas with the mobile station by transmitting a checking data to the mobile station, this</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>checking data being sent to any mobile station whose presence in the special areas is monitored and being used by the mobile station for determining whether or not the defining signal received is a distinctive defining signal that defines, alone or with other distinctive defining signals, one or more of the special areas associated with the mobile station.</p> <p>7. The method according to claim 1, wherein the special operating means comprise a parameters database linking the special area to the mobile station and to a set of one or more operating parameters; and a value of at least one operational parameter of this set is adapted when an updating signal signaling that the mobile station exits or enters the special area is received.</p> <p>9. The method according to claim 1, wherein the updating signal includes a</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>request to access a service or multimedia content and the mobile telephone network routes this request to a part of the special operating means that allow or forbid the provision of this service or multimedia content depending on whether or not the mobile station is into the special area.</p> <p>11. A mobile system for monitoring the presence of a mobile station in one or more special areas defined for this mobile station, said system comprising:</p> <p>at least one radio communication defining device for repeatedly transmitting a radio distinctive defining signal that at least partially defines one of the special areas in at least one channel,</p> <p>special operating means for adapting the value of at least one operating parameter taking into account the presence of the</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>mobile station in each of the special areas, and</p> <p>a mobile station, comprising:</p> <p>storage for storing a checking data,</p> <p>observing means for observing said at least one channel, and</p> <p>processing means for processing any received signal in order to determine whether or not the signal received is a defining signal and, if the signal received is a defining signal, for determining based on the checking data whether or not the signal received is a distinctive defining signal and whether or not the mobile station is present in the special area,</p> <p>and the mobile station further comprising</p> <p>transmission means for sending, at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii)</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>when the mobile station remains into a special area an updating signal, that is uncorrelated to any mobile station phone call establishment, regarding the presence of the mobile station in one or more of the special areas from the processing means to the special operating means.</p> <p>12. The system according to claim 11, wherein the mobile system comprises special area location monitoring means for monitoring the correct location of at least a part of one or more of the special areas.</p> <p>13. A mobile station, comprising:</p> <p>observing means to observe a channel and process any received signal in order to determine whether or not it is receiving a defining signal,</p> <p>a processor to process any received defining signal and to determine, based on a</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>previously obtained checking data, whether or not the defining signal received is a distinctive defining signal that at least partially defines a special area,</p> <p>to determine whether or not it is present in one or more special areas, and to send an updating signal at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area to a mobile telephone network about its presence in one or more of the special areas, where said updating signal sending is uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station about its presence in the special areas.</p> <p>14. A non-transitory computer readable medium storing computer readable program</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>code for causing a computer to perform a method, the method comprising:</p> <p>(a) observing a channel and processing any received signal by the mobile station in order to determine whether or not it is receiving a defining signal,</p> <p>(b) processing any received defining signal by the mobile station and the mobile station determines, based on a previously obtained checking data, whether or not the defining signal received is a distinctive defining signal that at least partially defines one of the special areas, and determines whether or not the mobile station is present in one or more of the special areas,</p> <p>(c) sending an updating signal from the mobile station to a mobile telephone network about the mobile station presence in one or more of the special areas, where the updating signal sending is</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>uncorrelated to any mobile station phone call establishment and is based on the last determination performed by the mobile station about its presence in each of the special areas, and said updating signal being sent at least one of (i) periodically, (ii) when the mobile station enters into or exits from one of the special areas, and (iii) when the mobile station remains into a special area.</p> <p><u>'720 Patent</u></p> <p>1. A method associated with the use of a mobile station and a radio communication defining device that transmits a distinctive defining signal, the method comprising:</p> <p>receiving and processing the distinctive defining signal in the mobile station, the distinctive defining signal at least defining a special area by one or more of: (1) a coverage area of the distinctive defining signal; (2) a</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>portion of the coverage area that intersects with another area of coverage of another radio communication defining device; and (3) a sum of the area of coverage and the another area of coverage, the distinctive defining signal including information indicating whether or not the radio communication defining device is in a predetermined environment; and</p> <p>sending from the mobile station via a mobile telephone network the updating signal to one or more servers of a provider of presence related services about the mobile station's presence in the special area, the updating signal being useable by the one or more servers of the provider of presence related services to adjust an operating parameter, which comprises one or more of a tariff and a service flag, to adjust, activate, or deactivate the presence related services provided to the mobile station,</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>and the updating signal comprising the information indicative of whether or not the radio communication defining device is located in the predetermined environment.</p> <p>2. The method according to claim 1, wherein the sending of the updating signal is uncorrelated to any mobile station phone call establishment, the updating signal being sent at least one of (i) periodically, (ii) at times recent to when the mobile station enters into or exists from the special area, and (iii) when the mobile station remains in the special area.</p> <p><u>'030 Patent</u></p> <p>1. A method associated with a provider of presence related services in connection with the use of a mobile station and at least a first radio communication defining device that transmits a first distinctive defining signal, the first</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>distinctive defining signal at least partly defines a first special area by its coverage, the method comprising:</p> <p>electronically storing in one or more memories data capable of linking the mobile station to the first special area, the data including a checking data of the first radio communication defining device and a first identifier related to the mobile station,</p> <p>transmitting via a mobile telephone network to the mobile station at least a portion of the checking data,</p> <p>receiving from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call establishment that identifies the mobile station's presence in at least the first special area, the updating signal including a second identifier related to the mobile station,</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the first special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the first special area.</p> <p>2. The method according to claim 1, wherein the one or more processing devices has access to at least a portion of the data and updates at least one operating parameter in a database of the provider of presence related services depending on the presence of the mobile station in the first special area.</p> <p>10. The method according to claim 1, wherein the updating signal is received via</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>the mobile telephone network from the mobile station at least one of (i) periodically, (ii) at times recent to when the mobile station enters into or exists from the first special area, and (iii) when the mobile station remains in the first special area.</p> <p>11. The method according to claim 1, wherein the updating signal comprises a request to access to a service or to a multimedia content and the provider of presence related services enables or disables the provision of the service or multimedia content depending on the presence of the mobile station in the first special area.</p> <p><u>'621 Patent</u></p> <p>1. A method associated with a provider of presence related services in connection with the use of a mobile station that is operable within a mobile telephone network, and at least a first radio communication</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>defining device that transmits a first distinctive defining signal, the first distinctive defining signal at least partly defines a special area by its coverage, the provider of presence related services having one or more servers, the method comprising:</p> <p>electronically storing in the one or more servers of the provider of presence related services data capable of linking the mobile station to the special area, the data including a checking data of the first radio communication defining device and an identifier related to the mobile station, the provider of presence related services being different than the mobile telephone network,</p> <p>receiving in the one or more servers of the provider of presence related services from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call establishment that identifies the</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>mobile station's presence in the special area,</p> <p>the one or more servers of the provider of presence related services deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the special area.</p> <p>2. The method according to claim 1, wherein the one or more processing devices has access to at least a portion of the data and updates at least one operating parameter in a database of the provider of presence related services depending on the presence of the mobile station in the special area.</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>8. The method according to claim 1, wherein the updating signal is received in the one or more servers of the provider of presence related services via the mobile telephone network from the mobile station at least one of (i) periodically, (ii) at times recent to when the mobile station enters into or exits from the special area, and (iii) when the mobile station remains in the special area.</p> <p>10. A method associated with a provider of presence related services in connection with the use of a mobile station that is operable within a mobile telephone network, and at least a first radio communication defining device that transmits a first distinctive defining signal, the first distinctive defining signal at least partly defines a special area by its coverage, the provider of presence related services having one or more servers, the method comprising:</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>electronically storing in the one or more servers of the provider of presence related services data capable of linking the mobile station to the special area, the data including a checking data of the first radio communication defining device and an identifier related to the mobile station, the provider of presence related services being different than the mobile telephone network,</p> <p>transmitting to the mobile station from the one or more servers at least a portion of the checking data,</p> <p>receiving in the one or more servers from the mobile station via the mobile telephone network an updating signal uncorrelated to any mobile station phone call establishment that identifies the mobile station's presence in the special area, the updating signal including the identifier or other</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>identifier related to the mobile station,</p> <p>the one or more servers deriving from the updating signal by one or more processing devices having access to at least a portion of the data whether or not the mobile station is present in the special area; and</p> <p>enabling or disabling by use of the one or more processing devices a presence related service based upon the mobile station's presence or non-presence in the special area.</p> <p>11. The method according to claim 10, wherein the one or more processing devices has access to at least a portion of the data and updates at least one operating parameter in a database of the provider of presence related services depending on the presence of the mobile station in the special area.</p>				

#	Claim Language	Claim Term(s), Phrase(s), or Clause(s)	Plaintiff's Proposed Construction	Defendant's Proposed Construction	Court's Construction
	<p>17. The method according to claim 10, wherein the updating signal is received in the one or more servers of the provider of presence related services via the mobile telephone network from the mobile station at least one of (i) periodically, (ii) at times recent to when the mobile station enters into or exits from the special area, and (iii) when the mobile station remains in the special area.</p> <p><u>'032 Patent</u></p> <p>1. A method associated with a provider of presence related services and a mobile station that stores in a memory first checking data and uses the first checking data to determine whether or not a defining signal received from a radio communication defining device is a distinctive defining signal, the distinctive defining signal at least partly defines a special</p>
